

What is new inside SafeQuant:

There are the following changes from the original version in <https://github.com/eahrne/SafeQuant>.

1. Now SafeQuant can analyze the Spectronant output files.
2. You can set the experimental design by using an .txt file with more details about the conditions.
3. `-m` flag was added where the program will use the mean instead of the default setting which it is the median.
4. New imputation method was added: `-SM nDist`. Imputation the values according to the normal distribution.
